

KNOW WHO'S WHO... AND WHERE... IN AN EMERGENCY

FAST-PASS® MIU is an easy-to-use mobile identification system designed for rapid deployment and operation under adverse field conditions. Housed in a rugged, water resistant transportable case, the dual-power (110 or 12 volt) MIU contains a drop and spill resistant high performance laptop PC, camera, printer, ID card reader and a power distribution system that can be deployed and operational in minutes. **FAST-PASS®** MIU is the ideal system for emergency situations which require quick and accurate accounting of evacuees or identification and credentialing of emergency personnel.

FAST-PASS® MIU FEATURES

- First response to emergency operations
- Rapid deployment and operation under adverse field conditions
- Housed in a rugged, water resistant transportable case
- Stand alone or networked via a wireless/wired LAN or WAN
- Provides audiovisual verification for all operations
- Up-to-the-minute accountability and instant reporting
- Generates new or reads existing ID cards

- Supports rescue efforts, accounting for evacuees, facilitating quicker aid to the injured
- Verify and track evacuees, emergency personnel, general public, contractors and personnel
- Monitors building occupancy
- Generates lost or missing persons list
- Collects data for triage reporting

The MIU can be configured to read, capture and validate travel documents (Gov ID, CAC, DL and Passport), capture photographs, biometrics, and print ID cards or passes, track and report on the entry and exit of personnel from an emergency site, building, vessel or temporary location. Stand alone, wireless, or hard wired to a network, the system is ideal for tactical and emergency operations where personnel identification and visitor screening are critical. Internet enabled, the MIU allows real time verification of identity, watch list or background checks.
