Miami-Dade County awards Security Identification Systems Corporation (SISCO) Blanket P.O. For FAST-PASS Identity Management Solution

West Palm Beach – July 5, 2007 - Due to the increasing volume of visitors, Miami-Dade County recognized the need for additional security and recommended implementing an Identity Management Solution to control and track individuals accessing their facilities. FAST-PASS ® by Security Identification Systems Corporation (SISCO) was selected for its robust features, ease of use, and the ability to customize for the unique requirements of each department. A blanket P.O. was issued for a term of 3 years until 9/30/2008, and includes all 73 Departments such as; Emergency Management & Homeland Security (OEM), Water & Sewer Management, Business Development, Consumer Services, Child Advocate, Fire Rescue, and Port of Miami.

"FAST-PASS acts as a front line deterrent. It's easy to use and completes the whole process in seconds, providing a safer working environment without hindering the speed of commerce," said SISCO Director of Sales, Jonathan Fox.

Miami-Dade Office of Emergency Management & Homeland Security (OEM) is the first department to install the FAST-PASS Solution. In an emergency situation, it is imperative to rapidly identify and track all persons entering and exiting the facility. Recently FAST-PASS was also installed at the Department of Sewer & Water and Fire Rescue. The FAST-PASS system will read data from the driver's license or passport, populate the database, take a photo of the license and a current photo of the individual, cross check deny entry lists and print a photo visitor badge with barcode in seconds. Custom reports can be created to track each visitor and their movements throughout the facility or department, along with all deny entries. This provides an electronic audit trail of activity that can be printed or e-mailed for later retrieval of management or investigative reports.
